

TLS + attestation

Proposal for adoption by the
Attestation SIG

Back in July

- Ionut presentation [[YT link](#)] [[Slides](#)]
- Call for adoption
- No pushback but ask to seek for harmonisation with the other “attested TLS” projects in the Consortium

In the meantime

- "Encap" discussion [[draft-ftbs-rats-msg-wrap-01](#)]
- TLS protocol extensions [[draft-fossati-tls-attestation-02](#)]
- Key attestation using EAT [[draft-bft-rats-kat-00](#)]

Question

Is there still appetite to take this work in the SIG?
